

Water Filtration

Achieve crystal-clear results through high-quality industrial quartz

We offer a complete range of sized aggregates, media and additives for water production, filtration and water treatment. Consistently uniform chemistries, particle size distributions and performance attributes help ensure the efficient operation of industrial and chemical processes.

FILTERSIL® Filtration Sand and Gravel is produced from high-purity monocrystalline industrial quartz sand. FILTERSIL grades are engineered to perform in mixed media and pressure filters for portable water filtration and have been proven effective in industrial process water filtration and waste treatment.

If you're looking for a silica alternative, WHITELIGHTNING™ is a non-silica filtration additive produced from nepheline syenite.
